 Springer

Contents

1	Signals:	
	Acquisition, Classification, Sampling	1
	1.1 Introduction	1
	1.2 Digital Signal Processing Systems	2
	1.3 Signal Classes	7
	1.4 Base-Band and Sub-Band Sampling	12
	1.5 Analog Signal Reconstruction	18
	1.6 Summary	20
	1.7 Private Investigations - Free-Style Bungee Jumps	20
	Problems	20
	References	21
2	Signals:	
	Generation, Modulation, Parameters	23
	2.1 Introduction	23
	2.2 Deterministic Signals	24
	2.3 Random Signals	27
	2.4 Sines and Instantaneous Frequency	30
	2.5 Signal Parameters incl. Correlation Function	34
	2.6 Summary	37
	2.7 Private Investigations - Free-Style Bungee Jumps	39
	Problems	39
	References	42
3	Signal Orthogonal Transforms	45
	3.1 Introduction	45
	3.2 Orthogonal Transformation by Intuition - From Points in 3D to Vector Spaces	46
	3.3 Orthogonal Transformation Mathematical Basics	48
	3.4 Important Orthogonal Transforms	53
	3.5 Transformation Experiments	58

3.6	Optimal Discrete Orthogonal Transforms	62
3.7	Summary	63
3.8	Private Investigations - Free-Style Bungee Jumps	64
	Problems	64
	References	66
4	Discrete Fourier Transforms: DtFT and DFT	67
4.1	Introduction	67
4.2	Continuous Fourier Transform and Fourier Series	69
4.3	Discrete-Time Fourier Transform: From CFT to DtFT	74
4.4	Window functions	83
	4.4.1 Practical summary	83
	4.4.2 Mathematical description	83
	4.4.3 Application example	88
4.5	Discrete Fourier Transform	89
4.6	Summary	93
4.7	Private Investigations - Free-Style Bungee Jumps	94
	Problems	94
	References	95
5	Fast Fourier Transform	97
5.1	Introduction	97
5.2	Radix-2 FFT Algorithm	100
5.3	FFT Butterflies	105
5.4	Fast signal samples re-ordering	107
5.5	Example — 8-Point Radix-2 DIT FFT	108
5.6	Efficient FFT Usage for Real-Value Signals	112
5.7	FFT Algorithm with Decimation in Frequency	114
5.8	Summary	117
5.9	Private Investigations - Free-Style Bungee Jumps	118
	Problems	118
	References	119
6	FFT Applications — Tips and Tricks	121
6.1	Introduction	121
6.2	FFT Usage Principles	122
6.3	Fast Frequency Resolution Improvement	128
6.4	FFT of Noisy Signals: Welch Power Spectral Density	130
6.5	FFT of Time-Varying Signals	134
	6.5.1 Short-Time Fourier Transform	134
	6.5.2 Wigner-Ville Time-Frequency Signal Representation	137
6.6	Fast Convolution and Correlation Based on FFT	139
	6.6.1 Linear Convolution	139
	6.6.2 Circular convolution	140
	6.6.3 Fast linear convolution	141

6.6.4	Fast overlap-add and overlap-save sectioned convolution . . .	142
6.6.5	Fast signal correlation	146
6.6.6	Fast convolution/correlation example and program	146
6.7	Fast DtFT calculation via Chirp-Z transform	149
6.8	Blackman-Tukey PSD Fast Calculation	151
6.9	Fast Estimation of Damped Sinusoids by Interpolated DFT	152
6.10	Summary	156
6.11	Private Investigations - Free-Style Bungee Jumps	157
	Problems	157
	References	157
7	Analog Filters	159
7.1	Introduction	159
7.2	Analog LTI systems	160
7.3	RLC Circuit Example	167
7.4	Analog Filter Design by Zeros & Poles Method	171
7.5	Butterworth, Chebyshev and Elliptic Analog Filters	175
7.6	Frequency Transformation	180
7.7	Butterworth Filter Design Example	184
7.8	All Together Now: Unified Program for Analog Filter Design	186
7.9	Example of hardware design of analog filters	190
7.10	Summary	193
7.11	Private Investigations - Free-Style Bungee Jumps	194
	Problems	194
	References	195
8	IIR Digital Filters	197
8.1	Introduction	197
8.2	Discrete-Time LTI Systems	200
8.3	Digital Signal Filtering	204
8.4	Z-Transform and Its Features	207
8.5	Digital Filter Transfer Function and Frequency Response	209
8.6	Example: Digital Filter Design by TF Zeros & Poles Placement	213
8.7	Digital Filter Design Using Bilinear Transformation	216
8.8	Digital IIR Butterworth, Chebyshev and Elliptic Filters	221
8.9	IIR Filter Structures - Bi-quadratic Sections	227
8.10	Summary	229
8.11	Private Investigations - Free-Style Bungee Jumps	231
	Problems	231
	References	231
9	FIR Digital Filters	233
9.1	Introduction	233
9.2	FIR Filter Description	235
9.3	Window Method	242

9.4	Inverse DFT Method	250
9.5	Weighted Least Squares Method	252
9.6	Min-Max Equiripple Chebyshev Approximation Method	256
9.7	Efficient FIR Filter Implementations	258
9.8	Summary	260
9.9	Private Investigations - Free-Style Bungee Jumps	261
	Problems	261
	References	261
10	FIR Filters in Signal Interpolation, Re-sampling and Multi-Rate Processing	263
10.1	Introduction	263
10.2	Signal $1:K$ Up-Sampling - Simple Interpolation	266
10.3	Signal $L:1$ Down-Sampling - Simple Decimation	268
10.4	Signal $K:L$ Re-sampling	269
10.5	Matlab Functions for Signal Re-sampling	271
10.6	Fast Polyphase Re-sampling	272
10.6.1	Polyphase Signal Decomposition	273
10.6.2	Fast Polyphase Interpolation	275
10.6.3	Fast Polyphase Decimation	278
10.7	Filters with Fractional Delay	280
10.8	Farrow Interpolator	282
10.9	Asynchronous Sampling Rate Conversion	286
10.10	Multi-Resolution Signal Decomposition and Wavelet Filters	286
10.10.1	Multi-band Filter Banks	287
10.10.2	Two-band Wavelet Filter Banks and Wavelet Transform	287
10.10.3	Derivation of Wavelet Filter Equations	291
10.11	Summary	296
10.12	Private Investigations - Free-Style Bungee Jumps	297
	Problems	297
	References	297
11	FIR Filters for Phase Shifting and Differentiation	299
11.1	Introduction	299
11.2	FIR Hilbert Filter	300
11.2.1	Hilbert Filter Basics	300
11.2.2	Analytic Signal and AM-FM Demodulation Principle	303
11.2.3	Hilbert Filter Implementations	307
11.2.4	Hilbert Filter Applications - AM/FM Demodulation	311
11.3	FIR Differentiation Filters	316
11.4	Summary	320
11.5	Private Investigations - Free-Style Bungee Jumps	321
	Problems	321
	References	322

12	FIR Adaptive Filters	323
12.1	Introduction	323
12.2	Adaptive Filter Application Scenarios	326
12.3	Adaptive Filter Types	329
12.4	LMS Adaptive Filters	330
12.5	RLS Adaptive Filters	336
12.6	RLS Filters as Dynamic System Observers	339
12.7	Exercises	341
12.8	Summary	346
12.9	Private Investigations - Free-Style Bungee Jumps	347
	Problems	347
	References	348
13	Modern Frequency and Damping Estimation Methods	351
13.1	Introduction	351
13.2	Signal Model	352
13.3	Eigenvalue and Singular Value Matrix Decomposition	355
13.4	Discrete Hilbert Transform Method	359
13.5	Parametric Modeling Methods - Solving Linear Equations	360
13.5.1	Initial Problem Setup	360
13.5.2	Generalization for Multi-component Signals	361
13.5.3	Prony Method	362
13.5.4	Steiglitz-McBride Method - Self-Filtered Signal	364
13.5.5	Kumaresan-Tufts Method - Linear Prediction with SVD	366
13.5.6	Matrix Pencil Method	369
13.5.7	Yule-Walker Method - Linear Prediction Using Auto-Correlation Function	370
13.5.8	Pisarenko Method - Signal Subspace Methods	372
13.6	Interpolated DFT Methods	374
13.7	Summary	375
13.8	Private Investigations - Free-Style Bungee Jumps	376
	Problems	376
	References	378
14	Speech Compression and Recognition	381
14.1	Introduction	381
14.2	Speech Compression	383
14.3	Speech Compression Exercises	392
14.4	Speech Recognition	396
14.5	Summary	405
14.6	Private Investigations - Free-Style Bungee Jumps	406
	Problems	406
	References	409

15	Audio Compression	411
15.1	Introduction	411
15.2	Psycho-Acoustics of Human Hearing System	414
15.2.1	Fundamentals	414
15.2.2	Basics of Signal to Mask Ratio Calculation	417
15.3	Psycho-Acoustical MP2 Model	419
15.4	MP2 Filter Bank	422
15.5	Fast Polyphase Implementation of MP2 Filter Bank	429
15.6	Complete MP2 Matlab Encoder and Decoder	435
15.7	MP3 Coding Enhancements	438
15.8	AAC Advanced Audio Coding	442
15.9	Summary	444
15.10	Private Investigations - Free-Style Bungee Jumps	446
	Problems	446
	References	446
16	Image Processing	447
16.1	Introduction	447
16.2	Image Representation	449
16.3	2D Orthogonal Image Transformations	456
16.3.1	Definitions and calculation	456
16.3.2	Interpretation	458
16.3.3	Image Analysis and Filtering in Frequency Domain	460
16.4	2D Convolution and Image Filtering	466
16.5	Fundamentals of Lossless Image Compression	475
16.6	Image and Video Compression	479
16.6.1	JPEG - Still Images	479
16.6.2	MPEG - Moving Pictures	484
16.7	Image Watermarking	487
16.8	Summary	490
16.9	Private Investigations - Free-Style Bungee Jumps	490
	Problems	490
	References	491
17	Introduction to SDR:	
	IQ Signals and Frequency Up-Down Conversion	493
17.1	Introduction	493
17.2	Frequency Allocation	495
17.3	Service Frequency UP-DOWN Conversion	496
17.4	RF Signal Acquisition Hardware	503
17.5	Investigating Signal Spectra	508
17.6	Example: Calculating Spectra of IQ Signals	513
17.7	Summary	519
17.8	Private Investigations - Free-Style Bungee Jumps	521
	Problems	521

References	521
18 Frequency Modulation and Demodulation	525
18.1 Introduction	525
18.2 Frequency Modulation	526
18.3 Frequency Demodulation	530
18.4 FM Testing	534
18.5 FM Demodulation Examples	537
18.5.1 FM Radio Broadcasting	537
18.5.2 Amateur HAM Radio	539
18.5.3 Airplane Azimuth Calculation from VOR Signal	540
18.5.4 Safe Mode Nano-Satellite Signal	544
18.6 Summary	546
18.7 Private Investigations - Free-Style Bungee Jumps	546
Problems	546
References	547
19 Amplitude Modulation, Demodulation and Carrier Recovery	549
19.1 Introduction	549
19.2 Amplitude Modulation	553
19.3 Amplitude Demodulation	558
19.4 Carrier Synchronization Importance	563
19.5 Carrier Recovery in Suppressed Carrier AM Modulation	565
19.6 Carrier Recovery - Phase Locked Loop	568
19.6.1 Real-Value PLL	568
19.6.2 Complex-value PLL	572
19.6.3 Using PLL Program	573
19.7 Carrier Recovery - Costas Loop	575
19.8 Carrier Recovery Example - MPX Signal in FM Radio	581
19.9 Summary	588
19.10 Private Investigations - Free-Style Bungee Jumps	589
Problems	589
References	590
20 Introduction to Single Carrier Digital Modulation Systems	593
20.1 Introduction	593
20.2 Basics of Single Carrier Modulation	595
20.3 Basics of Single Carrier Transmission Systems	598
20.4 Source Coding	601
20.5 Digital Modulation and Demodulation	603
20.5.1 Carrier States Definition and Generation	603
20.5.2 Carrier States Interpolation - Pulse Shaping Filters	607
20.5.3 Carrier States Interpolation - In Action	612
20.5.4 Carrier States Detection	621
20.6 Frequency Up-Down Conversion - Symbols and Bits per Second ...	624

20.7 Disturbances and Obstacles	631
20.8 Summary	636
20.9 Private Investigations - Free-Style Bungee Jumps	637
Problems	637
References	638
21 Digital Single Carrier Receiver	639
21.1 Introduction	639
21.2 Receiver Synchronization and Channel Equalization Program	641
21.3 Preambles Detection and Frame/Symbol Synchronization	645
21.4 Carrier Offsets Detection and Correction	652
21.5 Channel Estimation and Equalization	653
21.6 Decreasing Signal Sampling Ratio	663
21.7 Timing Recovery Methods	666
21.8 Real-World Examples	674
21.8.1 Decoding Bits from Nano-Satellites	675
21.8.2 Decoding RDS Data in FM Radio	680
21.8.3 Decoding Carrier States in TETRA Digital Telephony	691
21.9 Summary	694
21.10 Private Investigations - Free-Style Bungee Jumps	695
Problems	695
References	696
22 Introduction to Digital Multi-Carrier Transmission - With DSL	
Modem Example	699
22.1 Introduction	699
22.2 Concept of Discrete Multi-Tone Transmission	702
22.3 Examples of Multiple Carriers Technology	709
22.4 Transmission Channels	714
22.5 DMT/OFDM Modulator and Demodulator	718
22.6 Carrier Orthogonality Importance	726
22.7 Transmission Disturbances and Distortions	729
22.8 DSL Modem Implementation Issues	731
22.8.1 Channel Estimation/Identification	732
22.8.2 ADC Sampling Rate Estimation and Correction	735
22.8.3 Time Equalization of the Channel	737
22.8.4 Frequency Equalization of the Channel	742
22.8.5 DMT/OFDM Symbol Synchronization	744
22.8.6 Influence of Disturbances	747
22.8.7 Bit Allocation and Channel Information Capacity	748
22.8.8 Choice of TEQ Equalizer	750
22.9 Program of DSL Modem	751
22.10 Summary	759
22.11 Private Investigations - Free-Style Bungee Jumps	760
Problems	760

References	761
23 Wireless Digital Multi-Carrier Transmission — With DAB Example .	763
23.1 Introduction	763
23.2 Reading Recorded DAB Files	765
23.3 DAB Physical Layer - Samples and Carriers	768
23.4 Synchronization	771
23.5 DQPSK-OFDM Demodulation	781
23.6 Removing Frequency Interleaving	784
23.7 Structure of FIC and MSC Block	785
23.8 FIC Decoding	786
23.9 MSC Decoding	791
23.10 DAB+ Super Frame Decoding	792
23.11 Final DAB Block Diagrams	794
23.12 Error Correction in DAB	798
23.12.1 Cyclic Redundancy Check Encoder and Decoder	799
23.12.2 Application of Reed-Solomon Coding	803
23.12.3 Convolutional Coding and Viterbi Decoder	805
23.13 Summary	811
23.14** Private Investigations - Free-Style Bungee Jumps	812
Problems	812
References	813
24 Modern Wireless Digital Communications - 4G and 5G Mobile	
Internet Access (with Grzegorz Cisek as a co-author)	815
24.1 Introduction	815
24.2 LTE Basics	818
24.3 Decoding 4G LTE Physical Broadcast Channel	827
24.3.1 LTE Signal Recording and Its Spectrum Observation	827
24.3.2 Signal Pre-processing and Integer CFO Correction	829
24.3.3 Signal Auto-Correlation - Fractional Carrier Frequency	
Offset Estimation and Correction	832
24.3.4 PSS Signals - Frame Synchronization, CFO Correction	
and Channel Estimation	835
24.3.5 SSS Signals - Physical Radio Cell Identification	841
24.3.6 CRS Signals - PBCH Decoding	844
24.4 Experiments Using Synthesized LTE Signals	852
24.5 5G New Radio	856
24.5.1 Introduction to 5G NR	856
24.5.2 Exemplary Data Decoding	861
